Verification literature container geneticbox: share of parts that fit the proven box

container mode (the instance's own box), t = 0, voxel pitch 2 mm; 1.0 = everything fits; bars = mean over instances and repeats, 99% CI

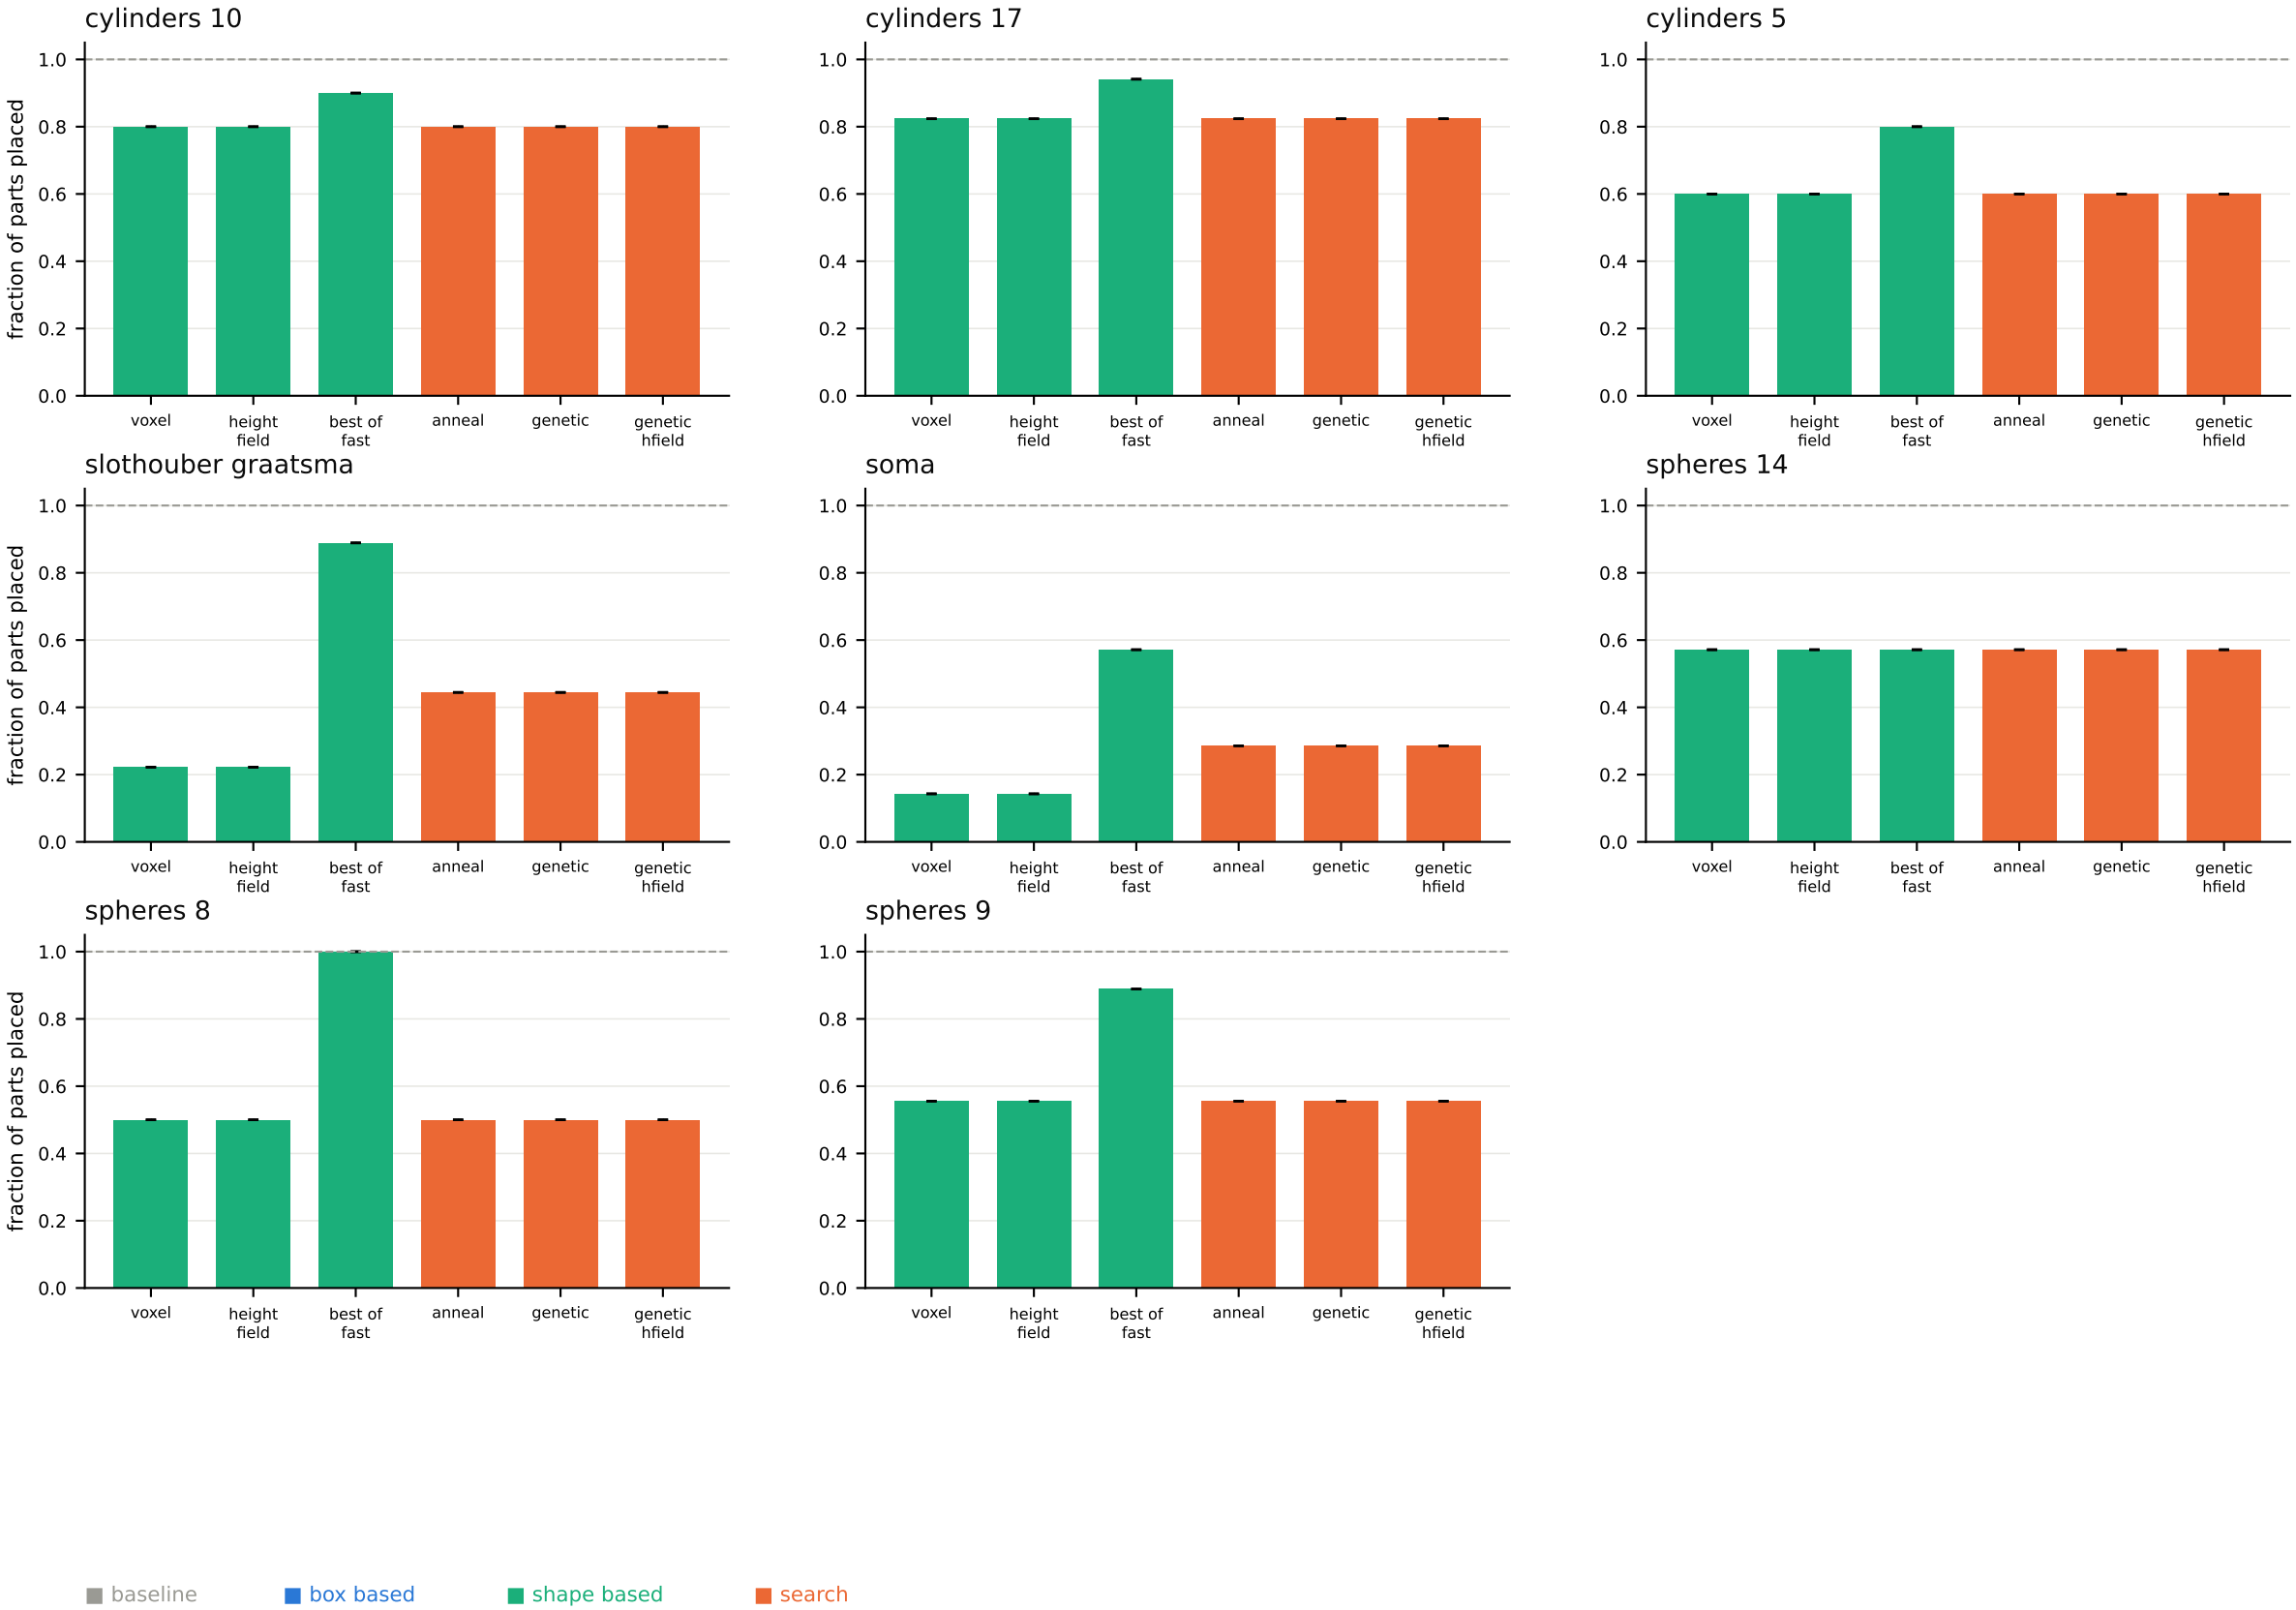

Verification literature container geneticbox: solved rate

solved = valid, all parts placed and within 2% of the optimum (container mode, voxel pitch 2 mm)

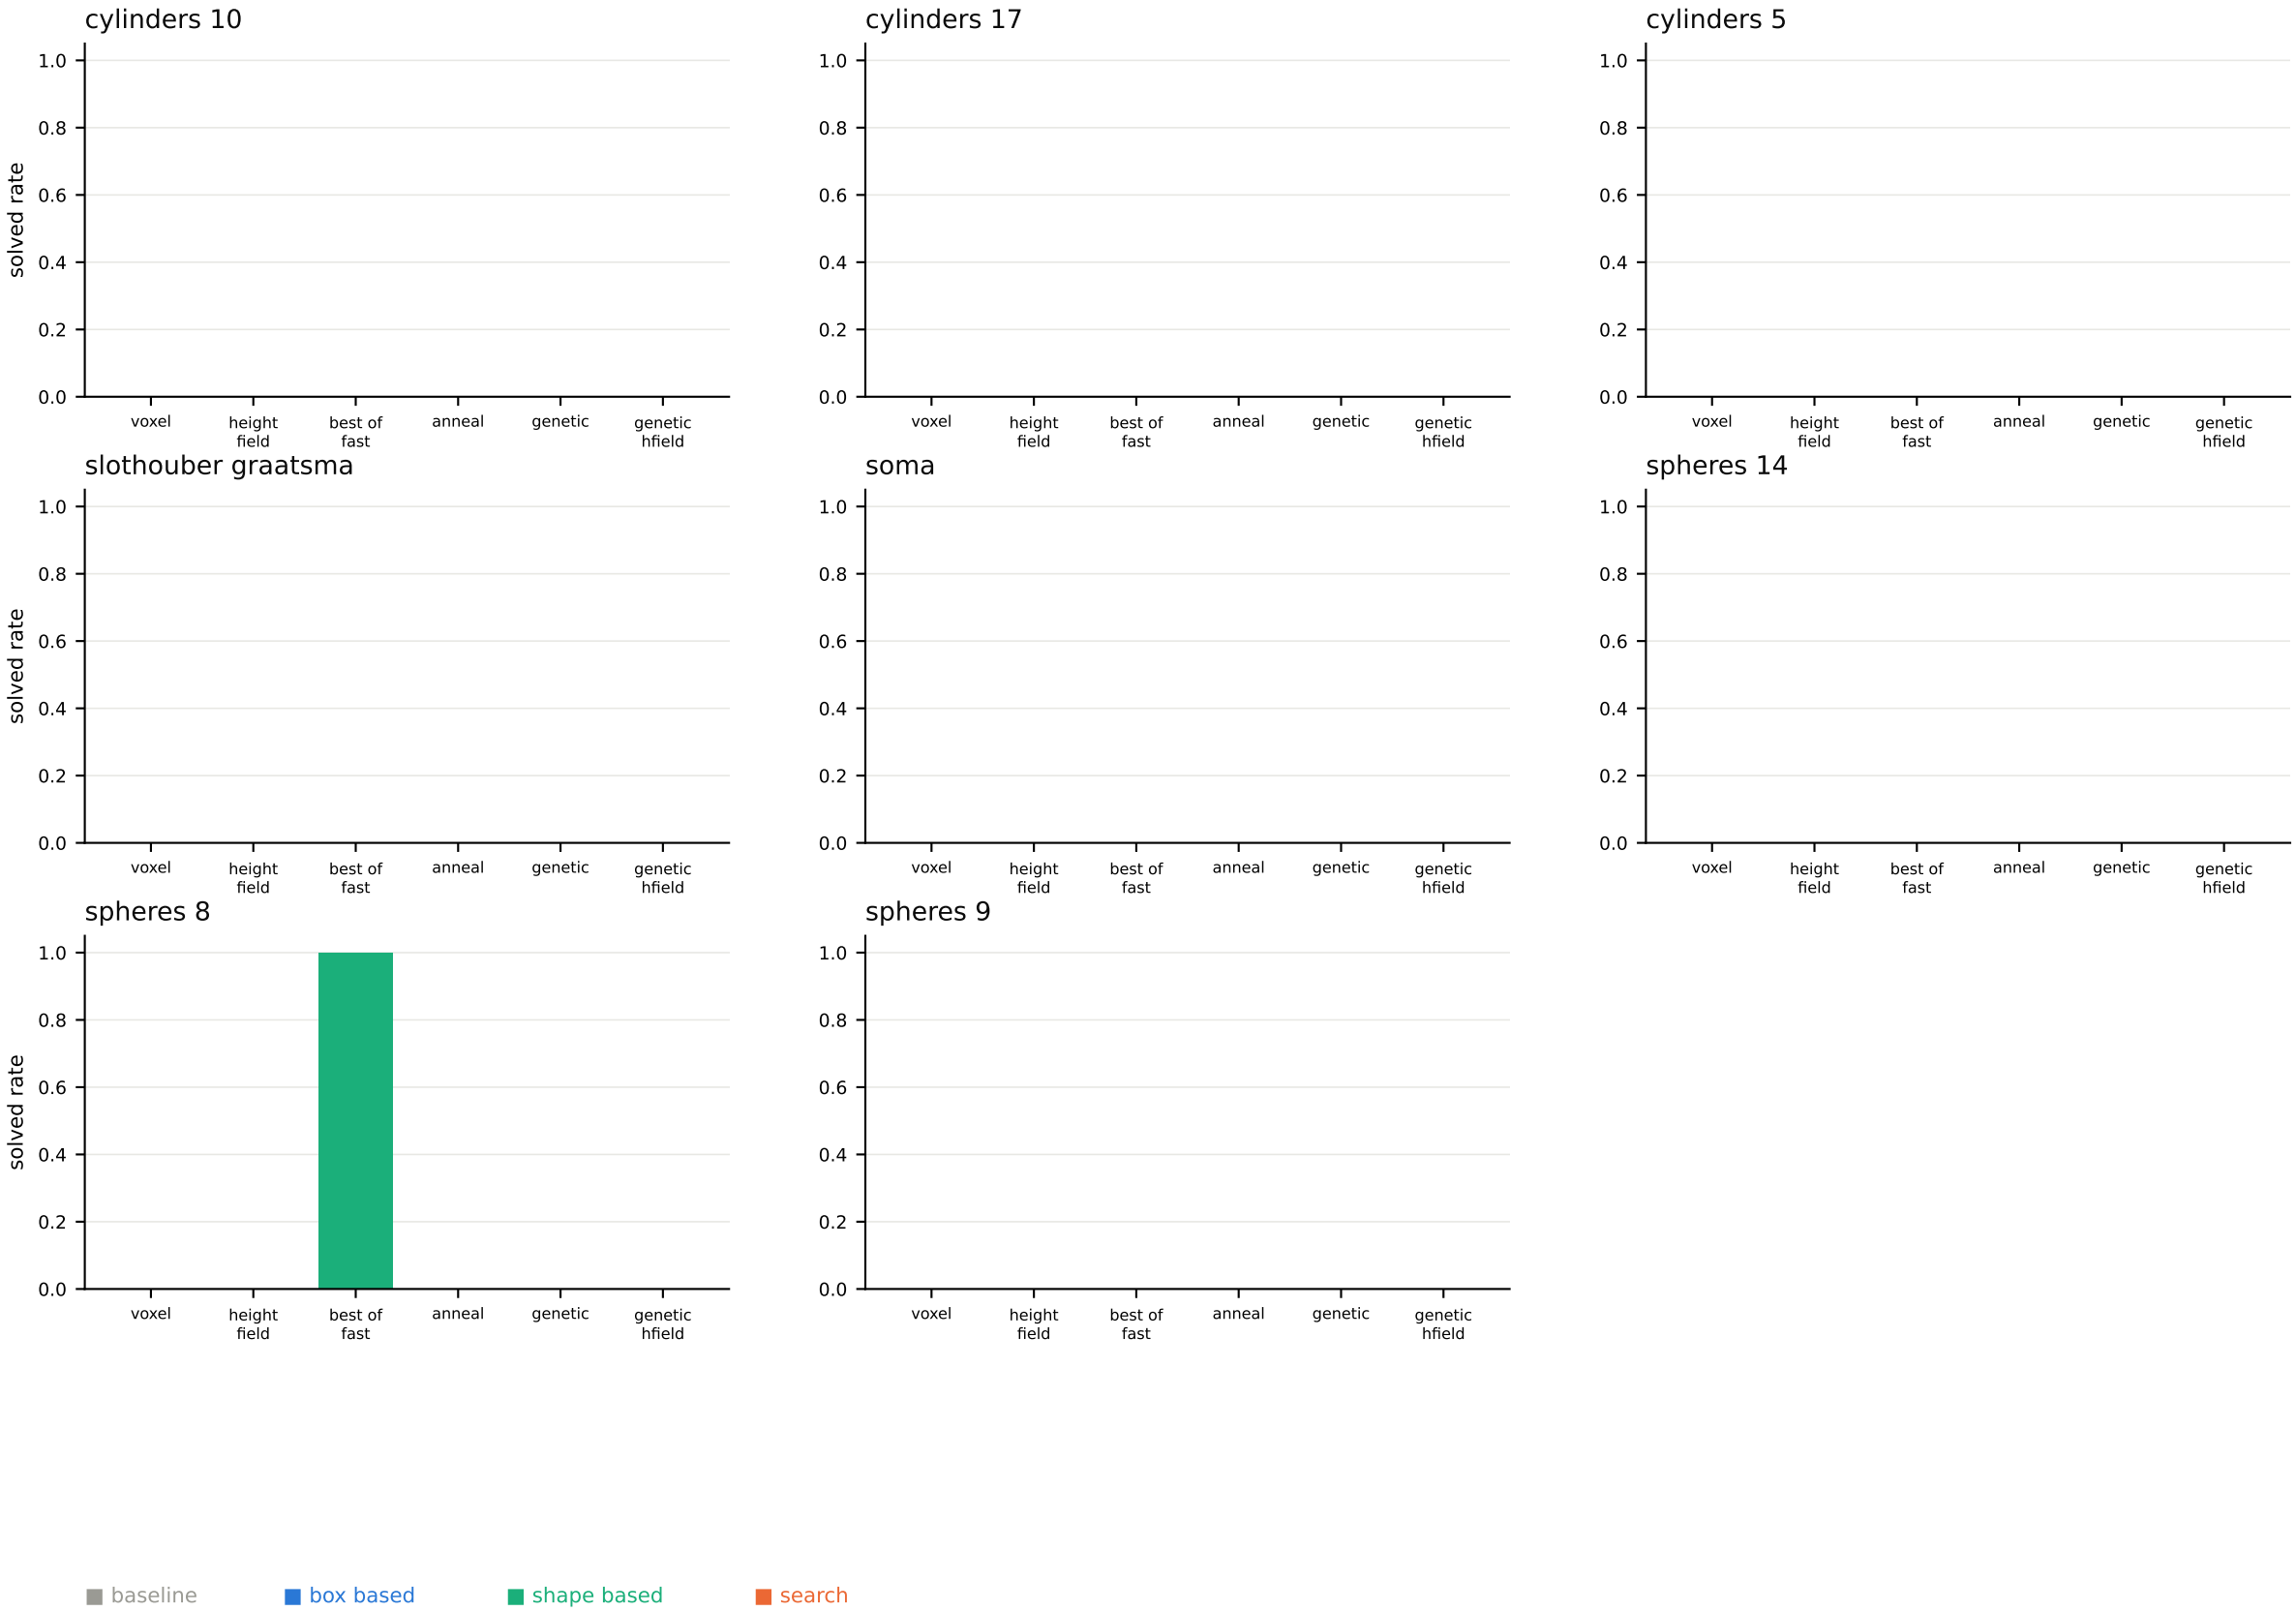

Verification literature container pitch1: share of parts that fit the proven box

container mode (the instance's own box), t = 0, voxel pitch 1 mm; 1.0 = everything fits; bars = mean over instances and repeats, 99% CI

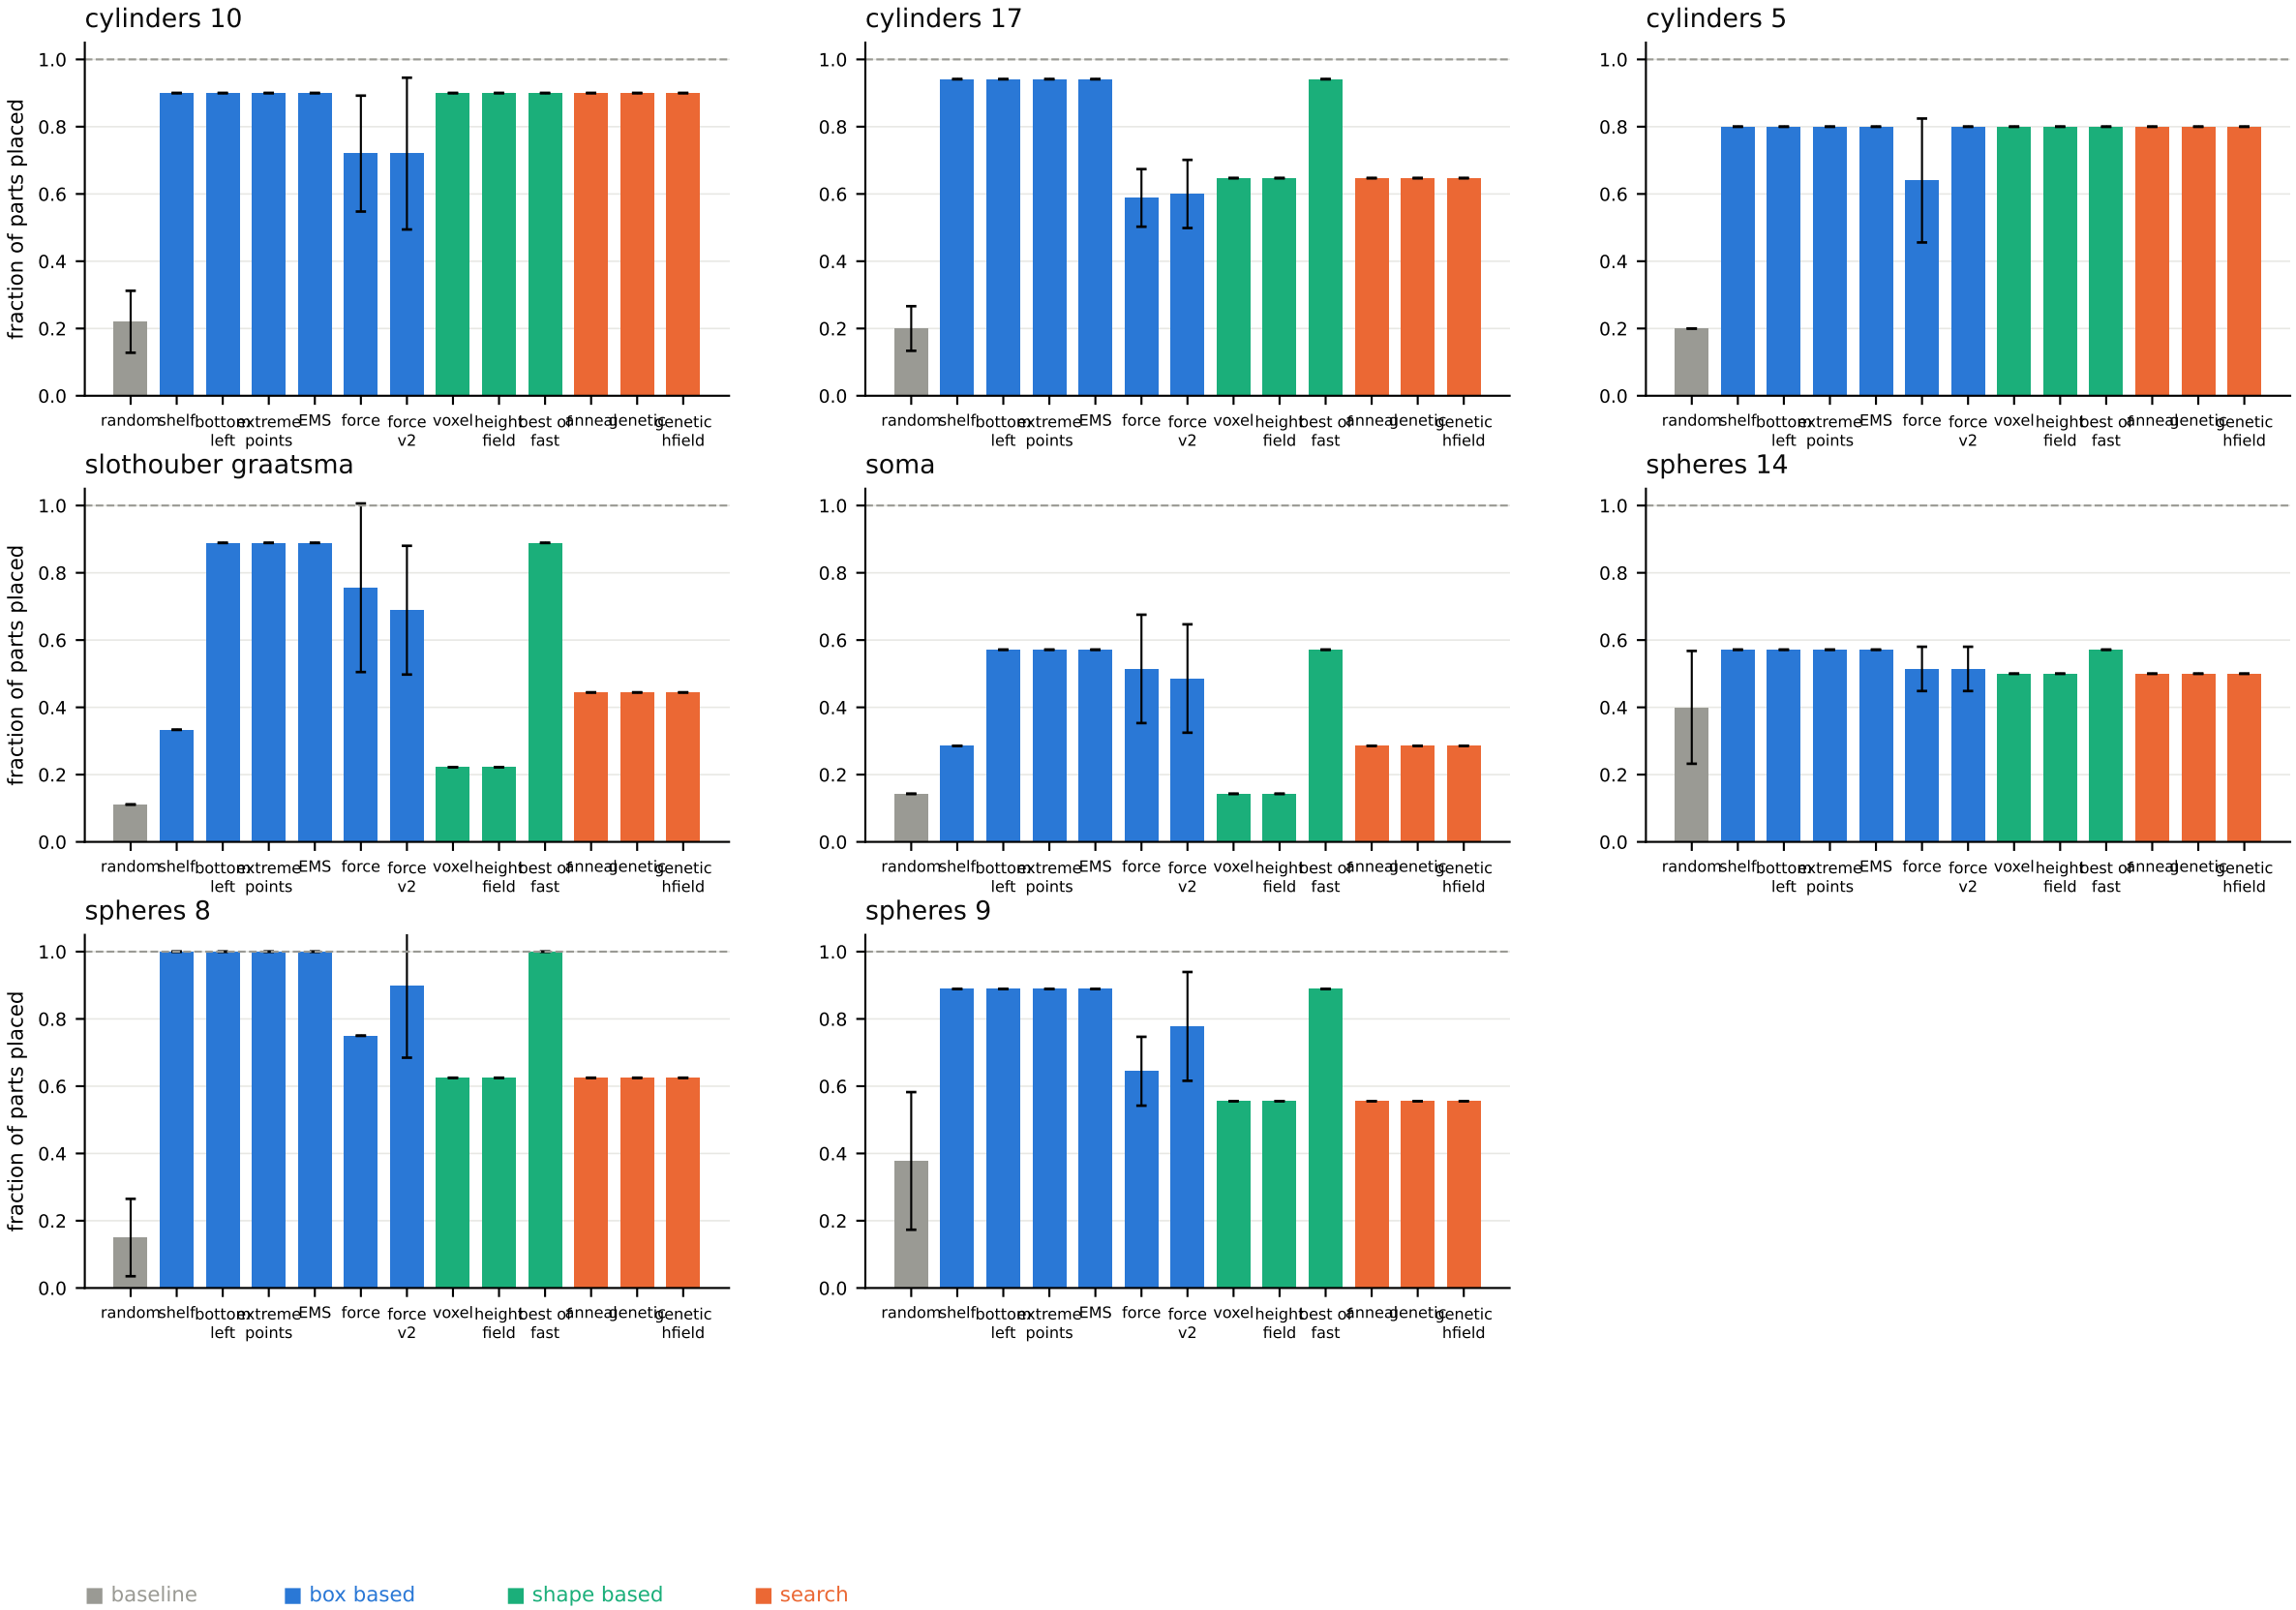

Verification literature container pitch1: solved rate

solved = valid, all parts placed and within 2% of the optimum (container mode, voxel pitch 1 mm)

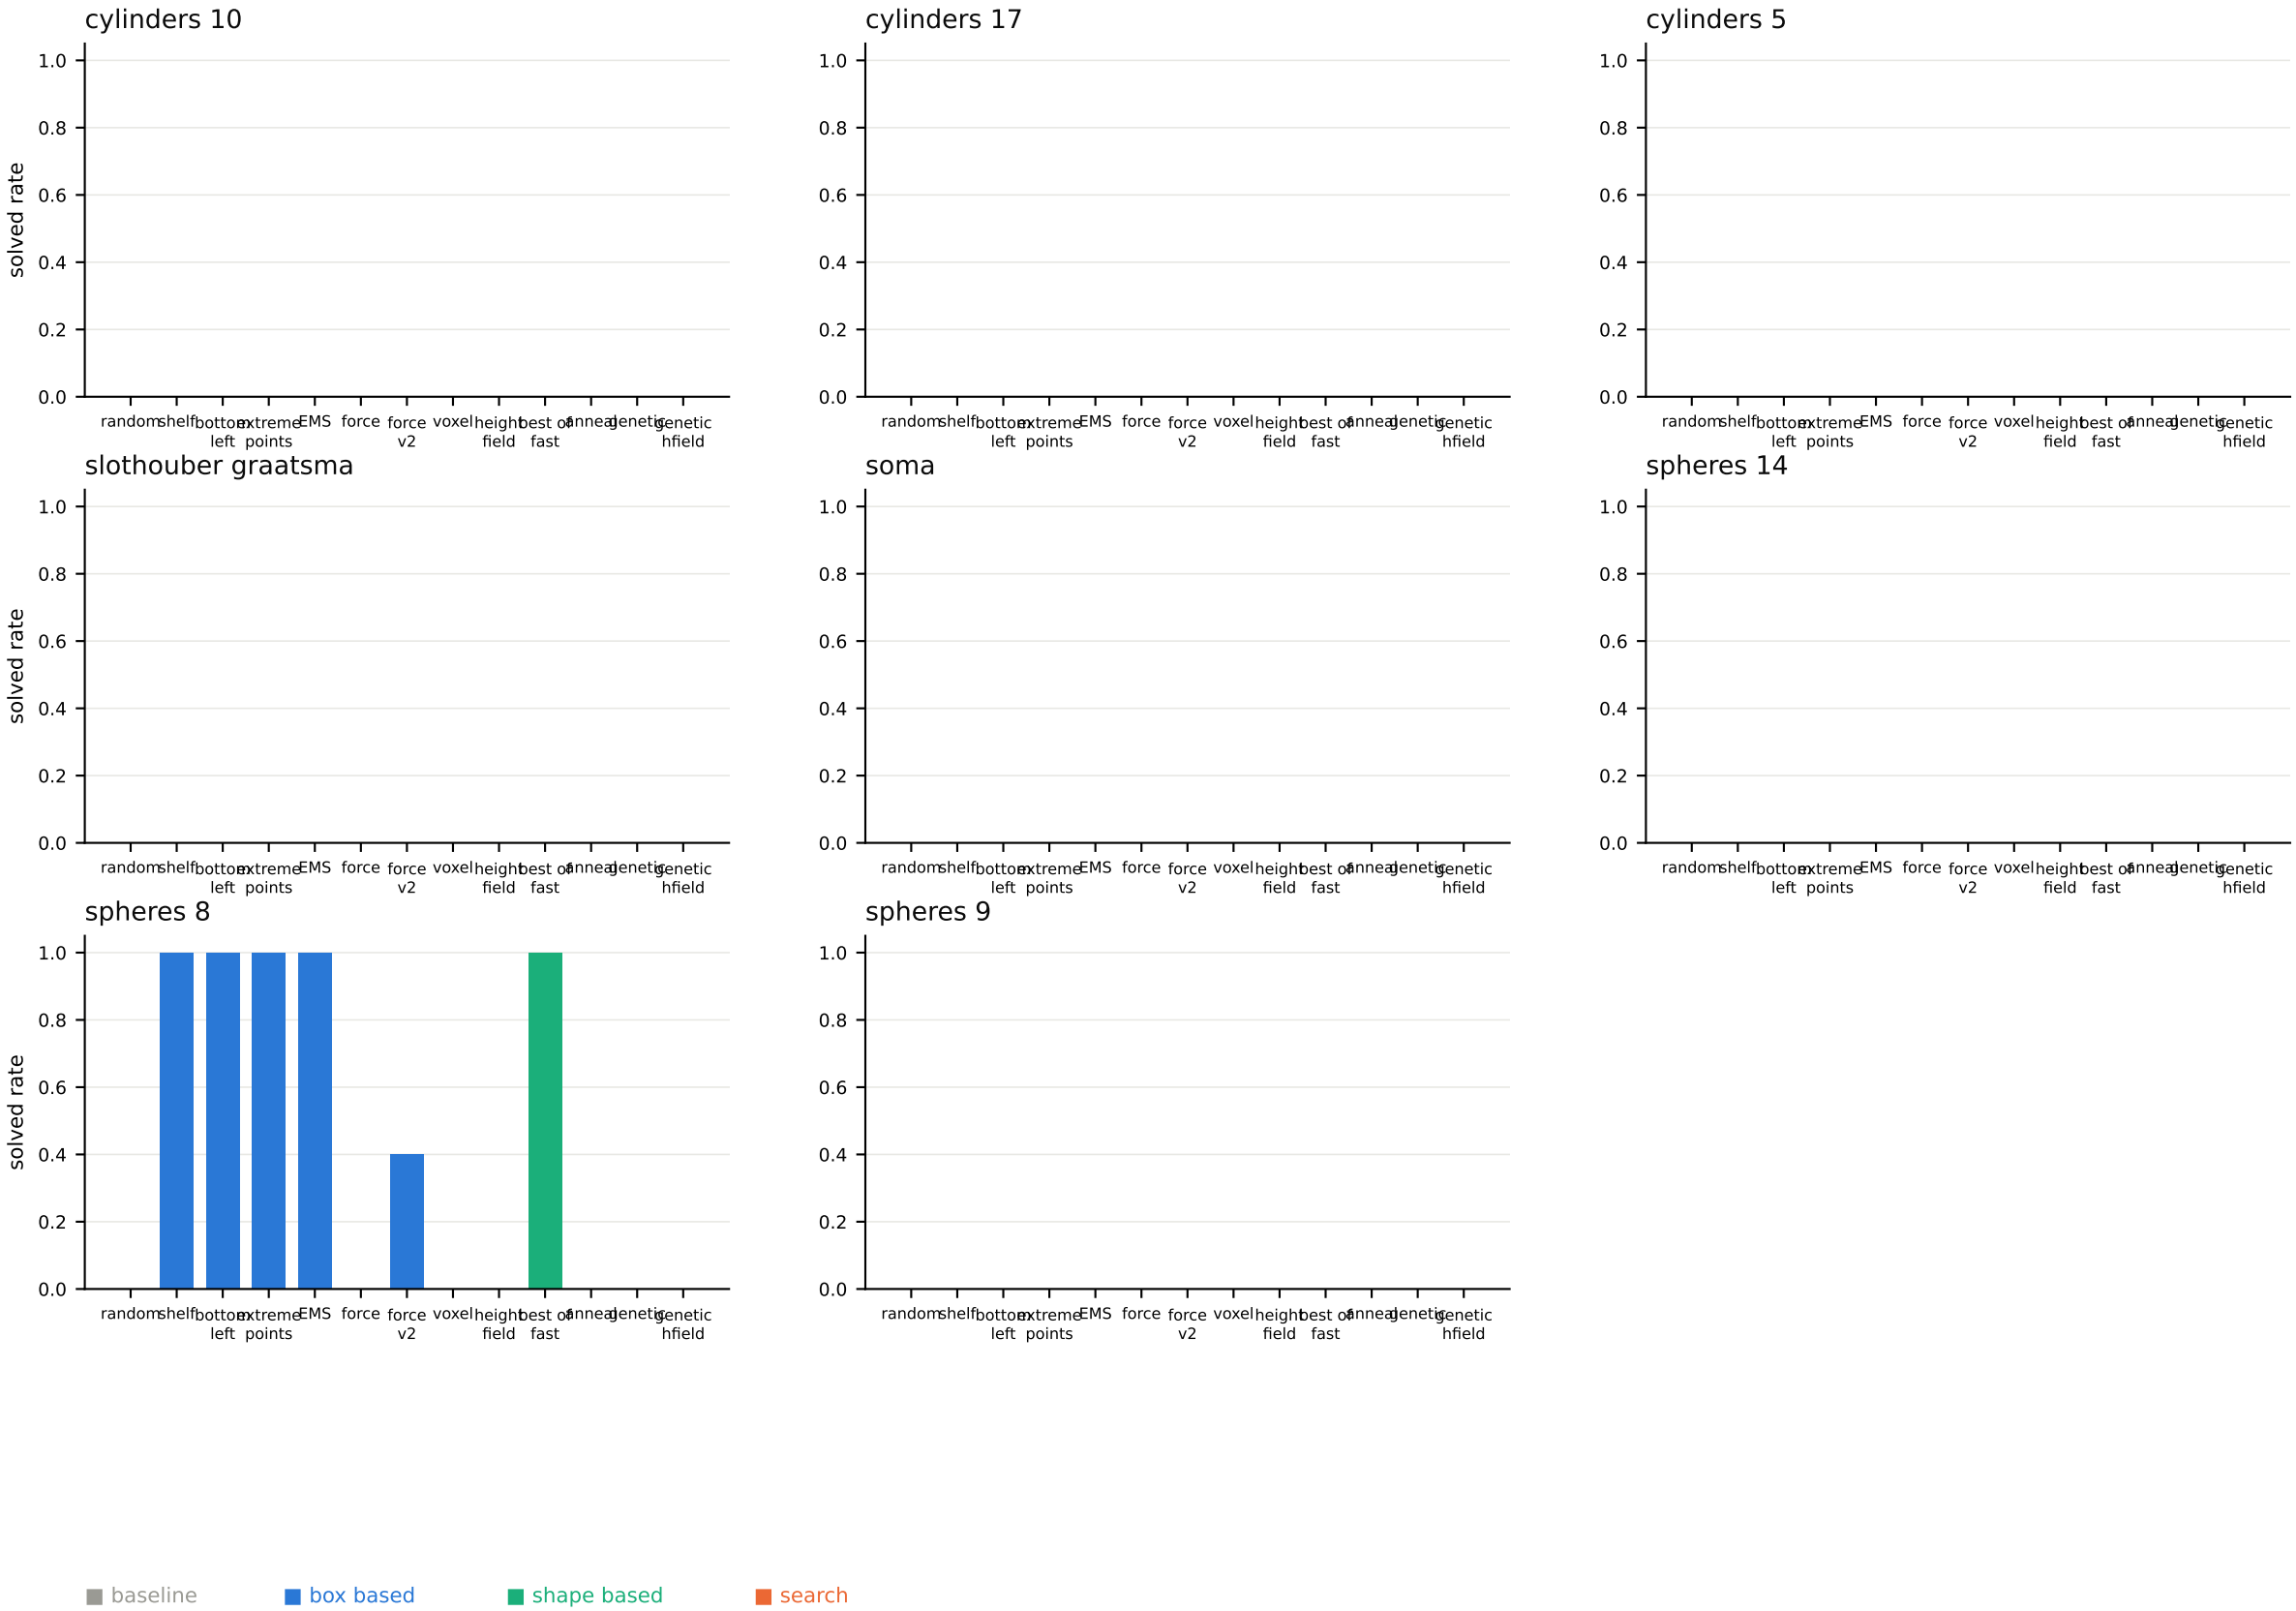

Verification literature container: share of parts that fit the proven box

container mode (the instance's own box), t = 0, voxel pitch 2 mm; 1.0 = everything fits; bars = mean over instances and repeats, 99% CI

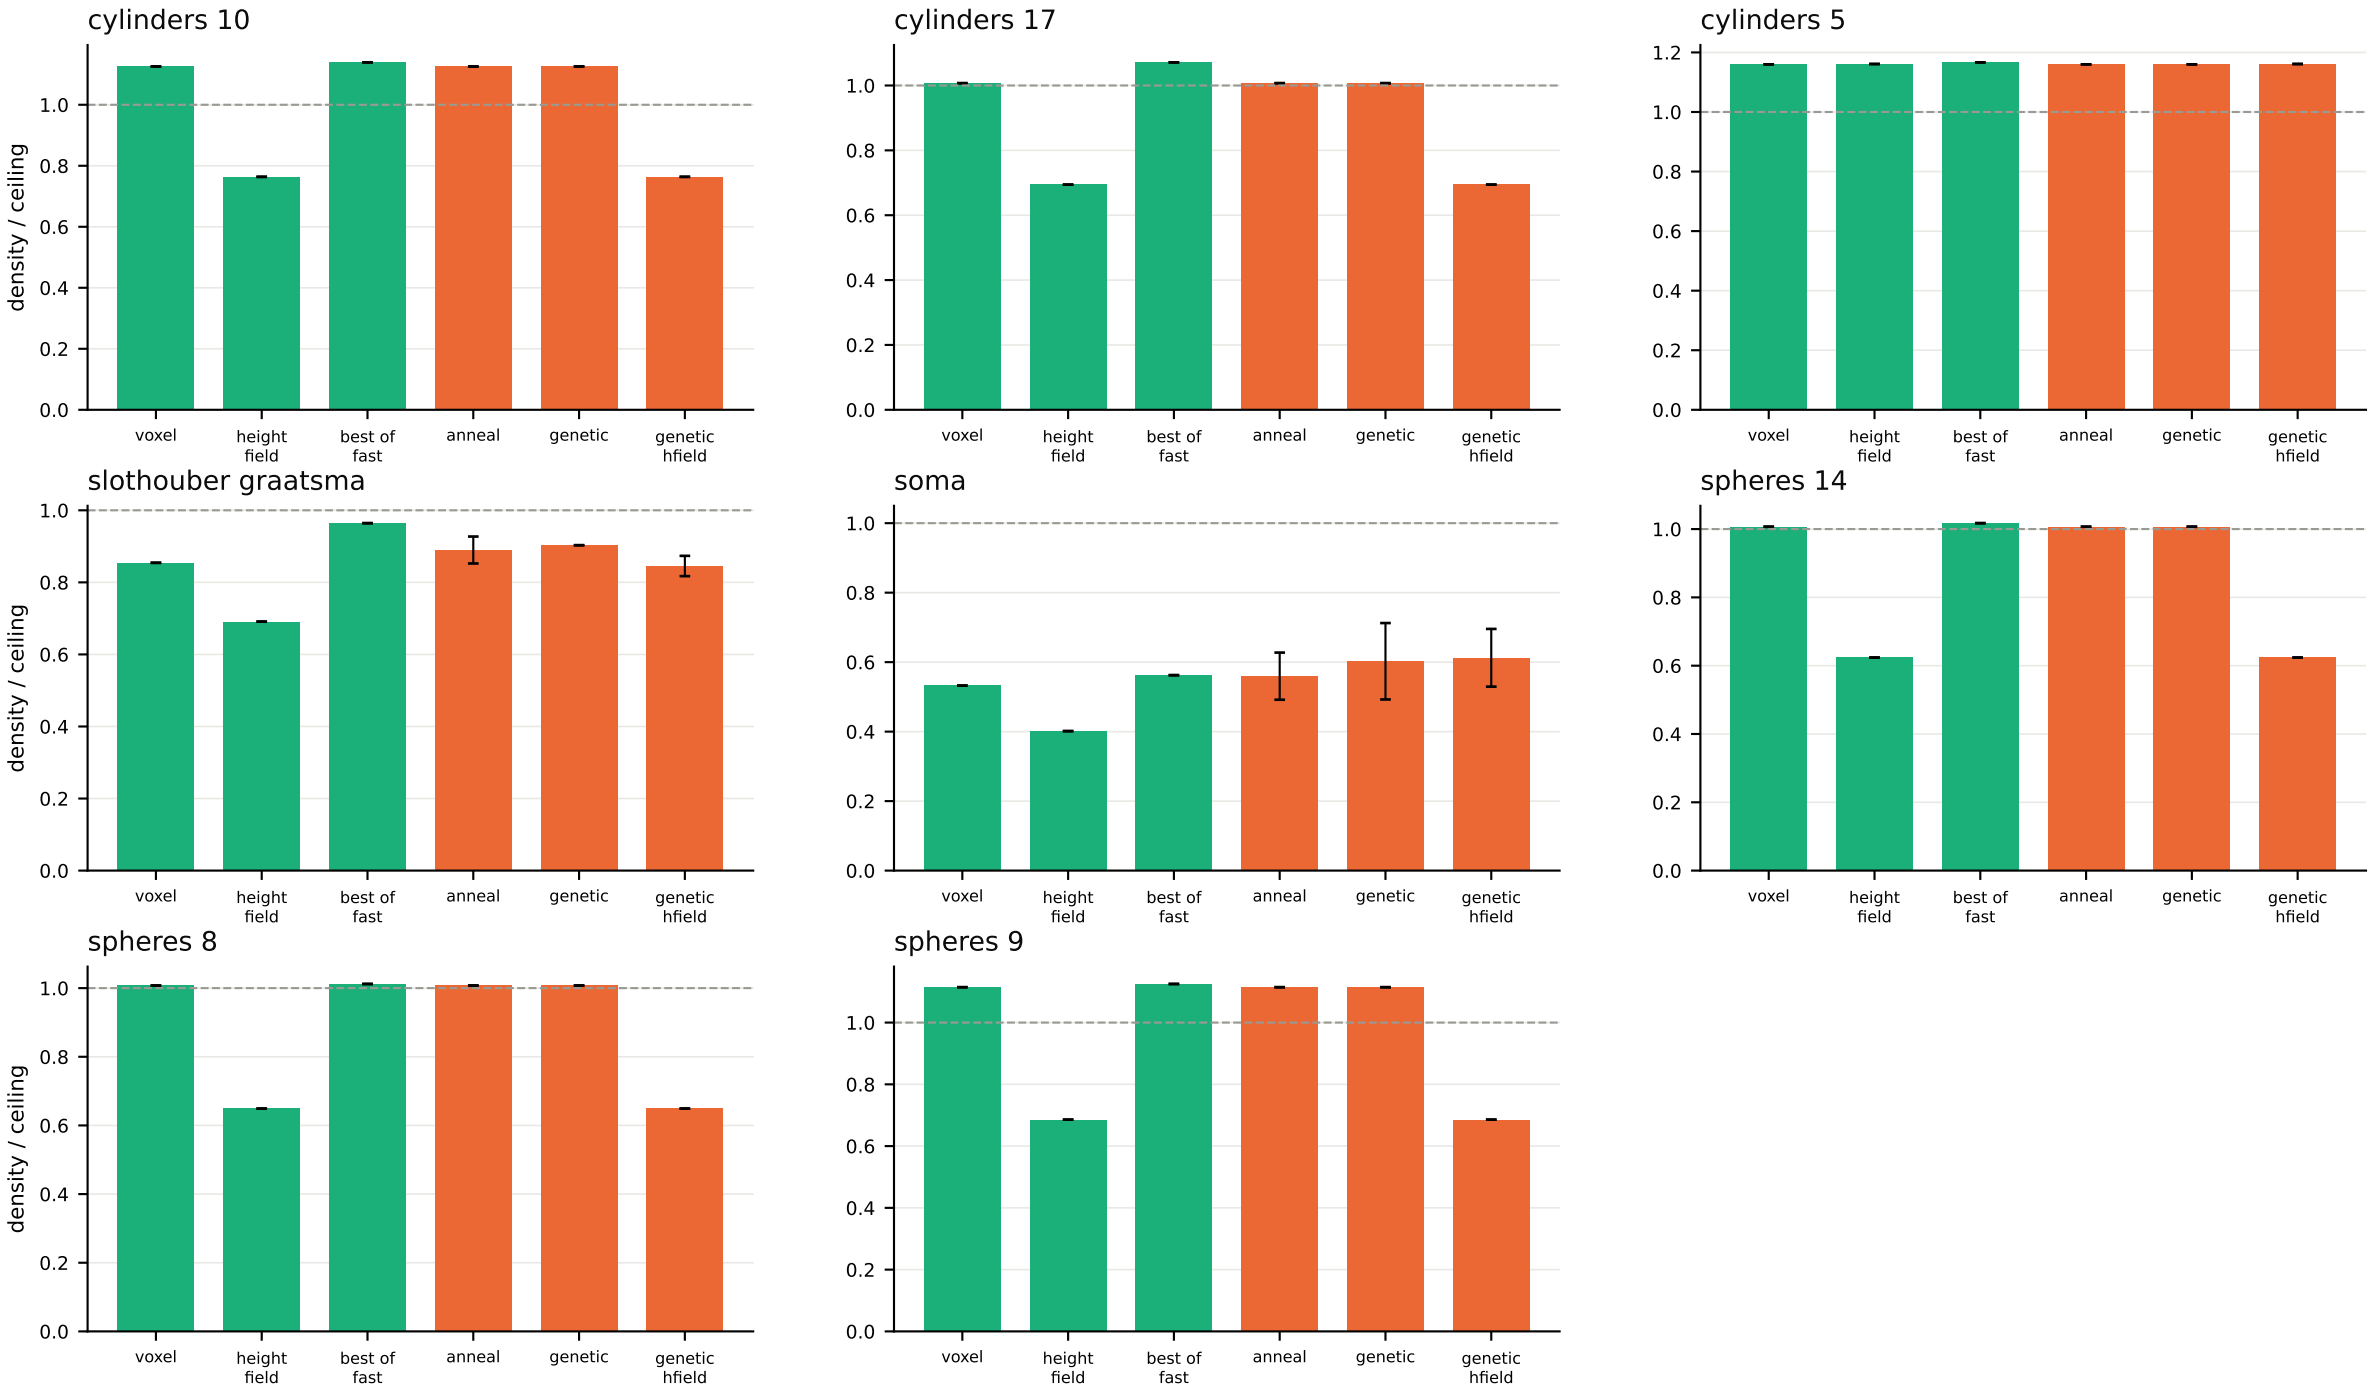

Verification literature container: solved rate

solved = valid, all parts placed and within 2% of the optimum (container mode, voxel pitch 2 mm)

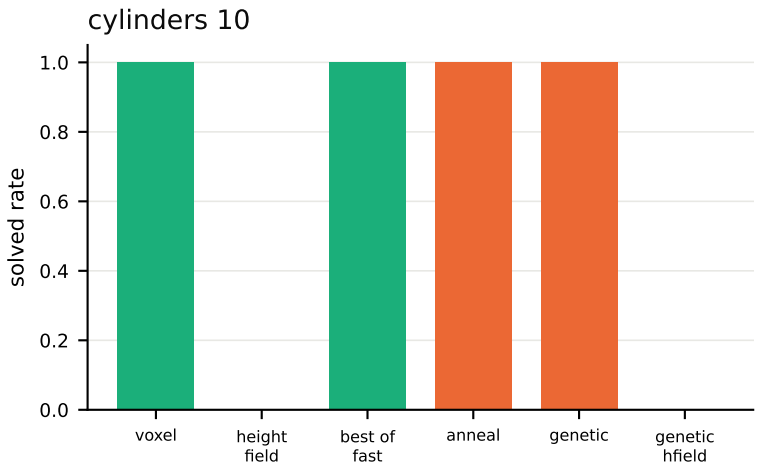

Verification literature open pitch1: ratio to the known optimum

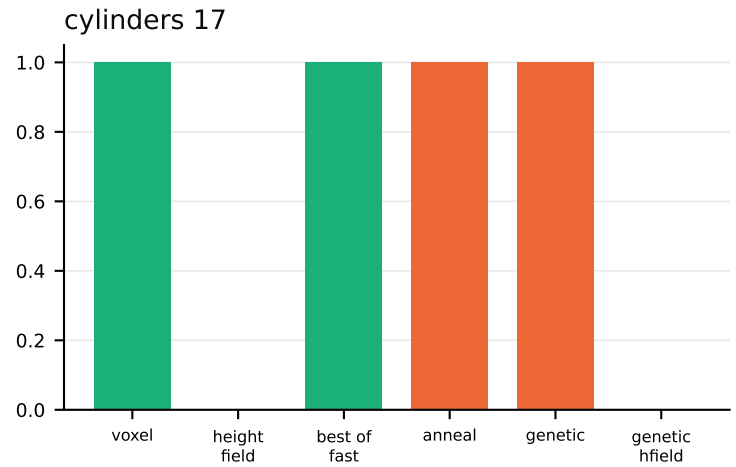

open mode (minimize the box), t = 0, voxel pitch 1 mm; ratio = density / ceiling; 1.0 = the known optimum (dashed); bars = mean over instances and repeats, 99% CI

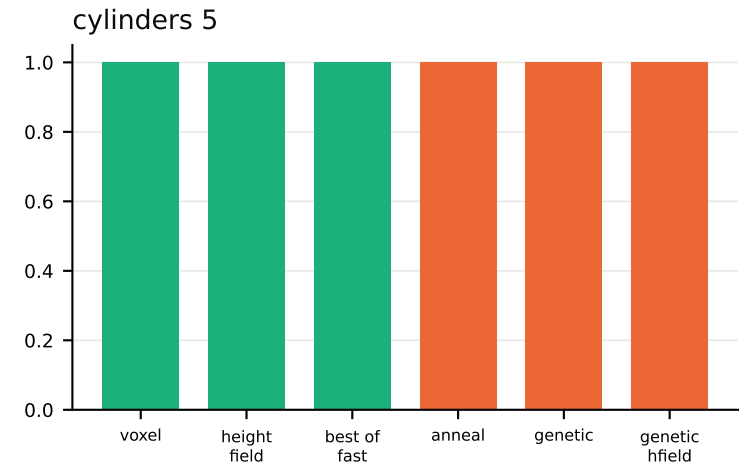

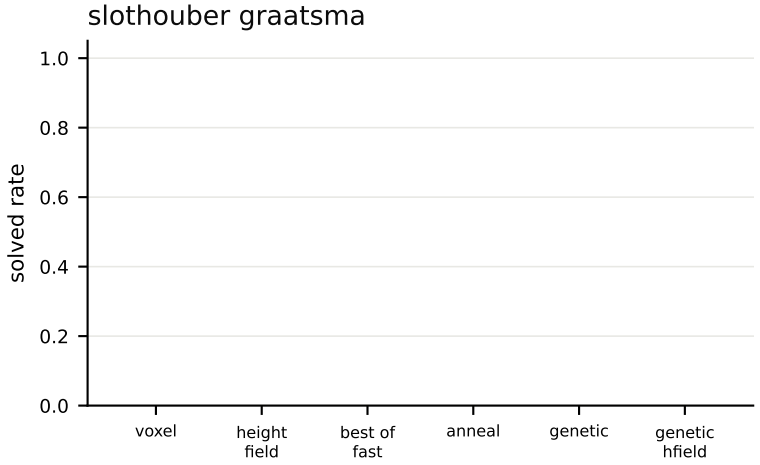

Verification literature open pitch1: solved rate

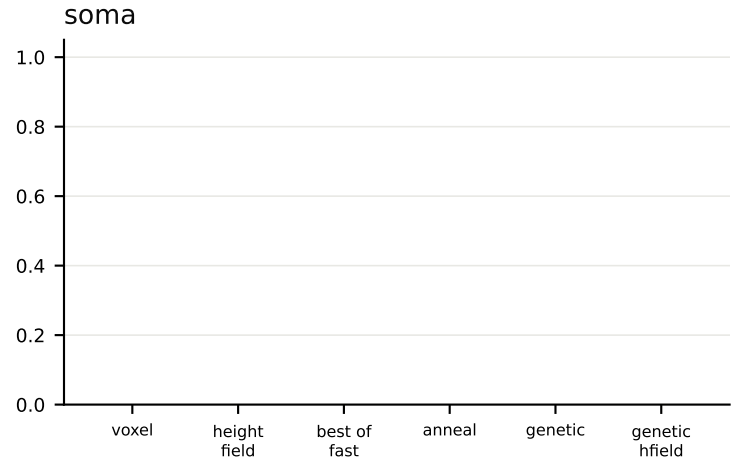

solved = valid, all parts placed and within 2% of the optimum (open mode, voxel pitch 1 mm)

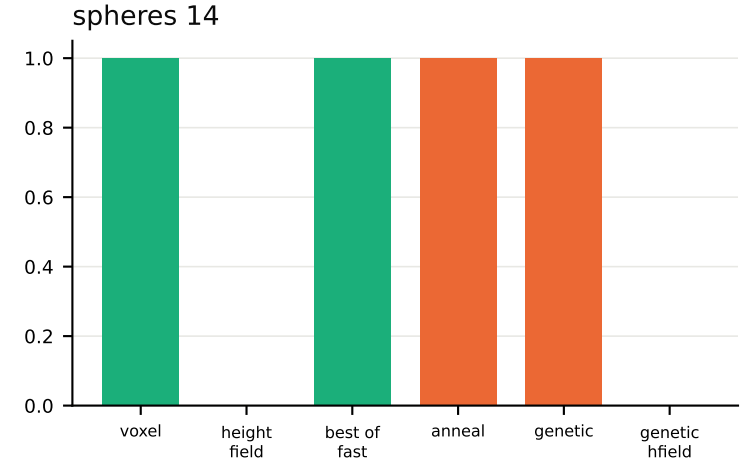

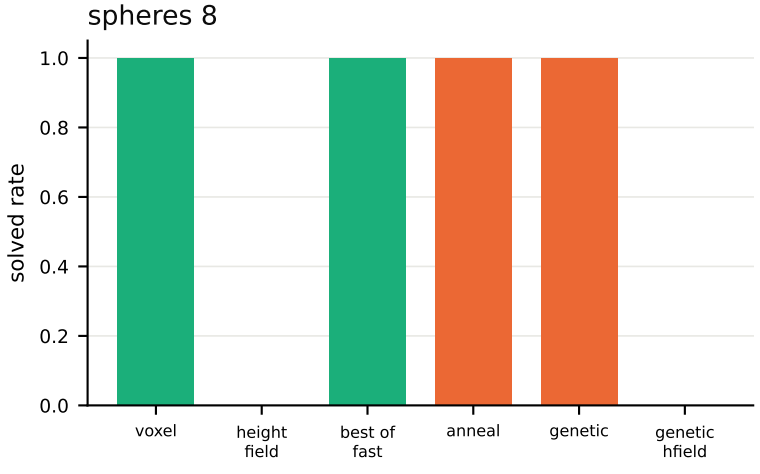

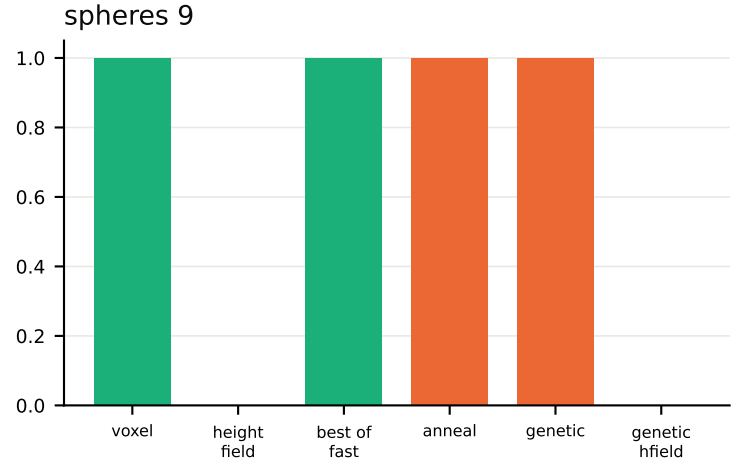

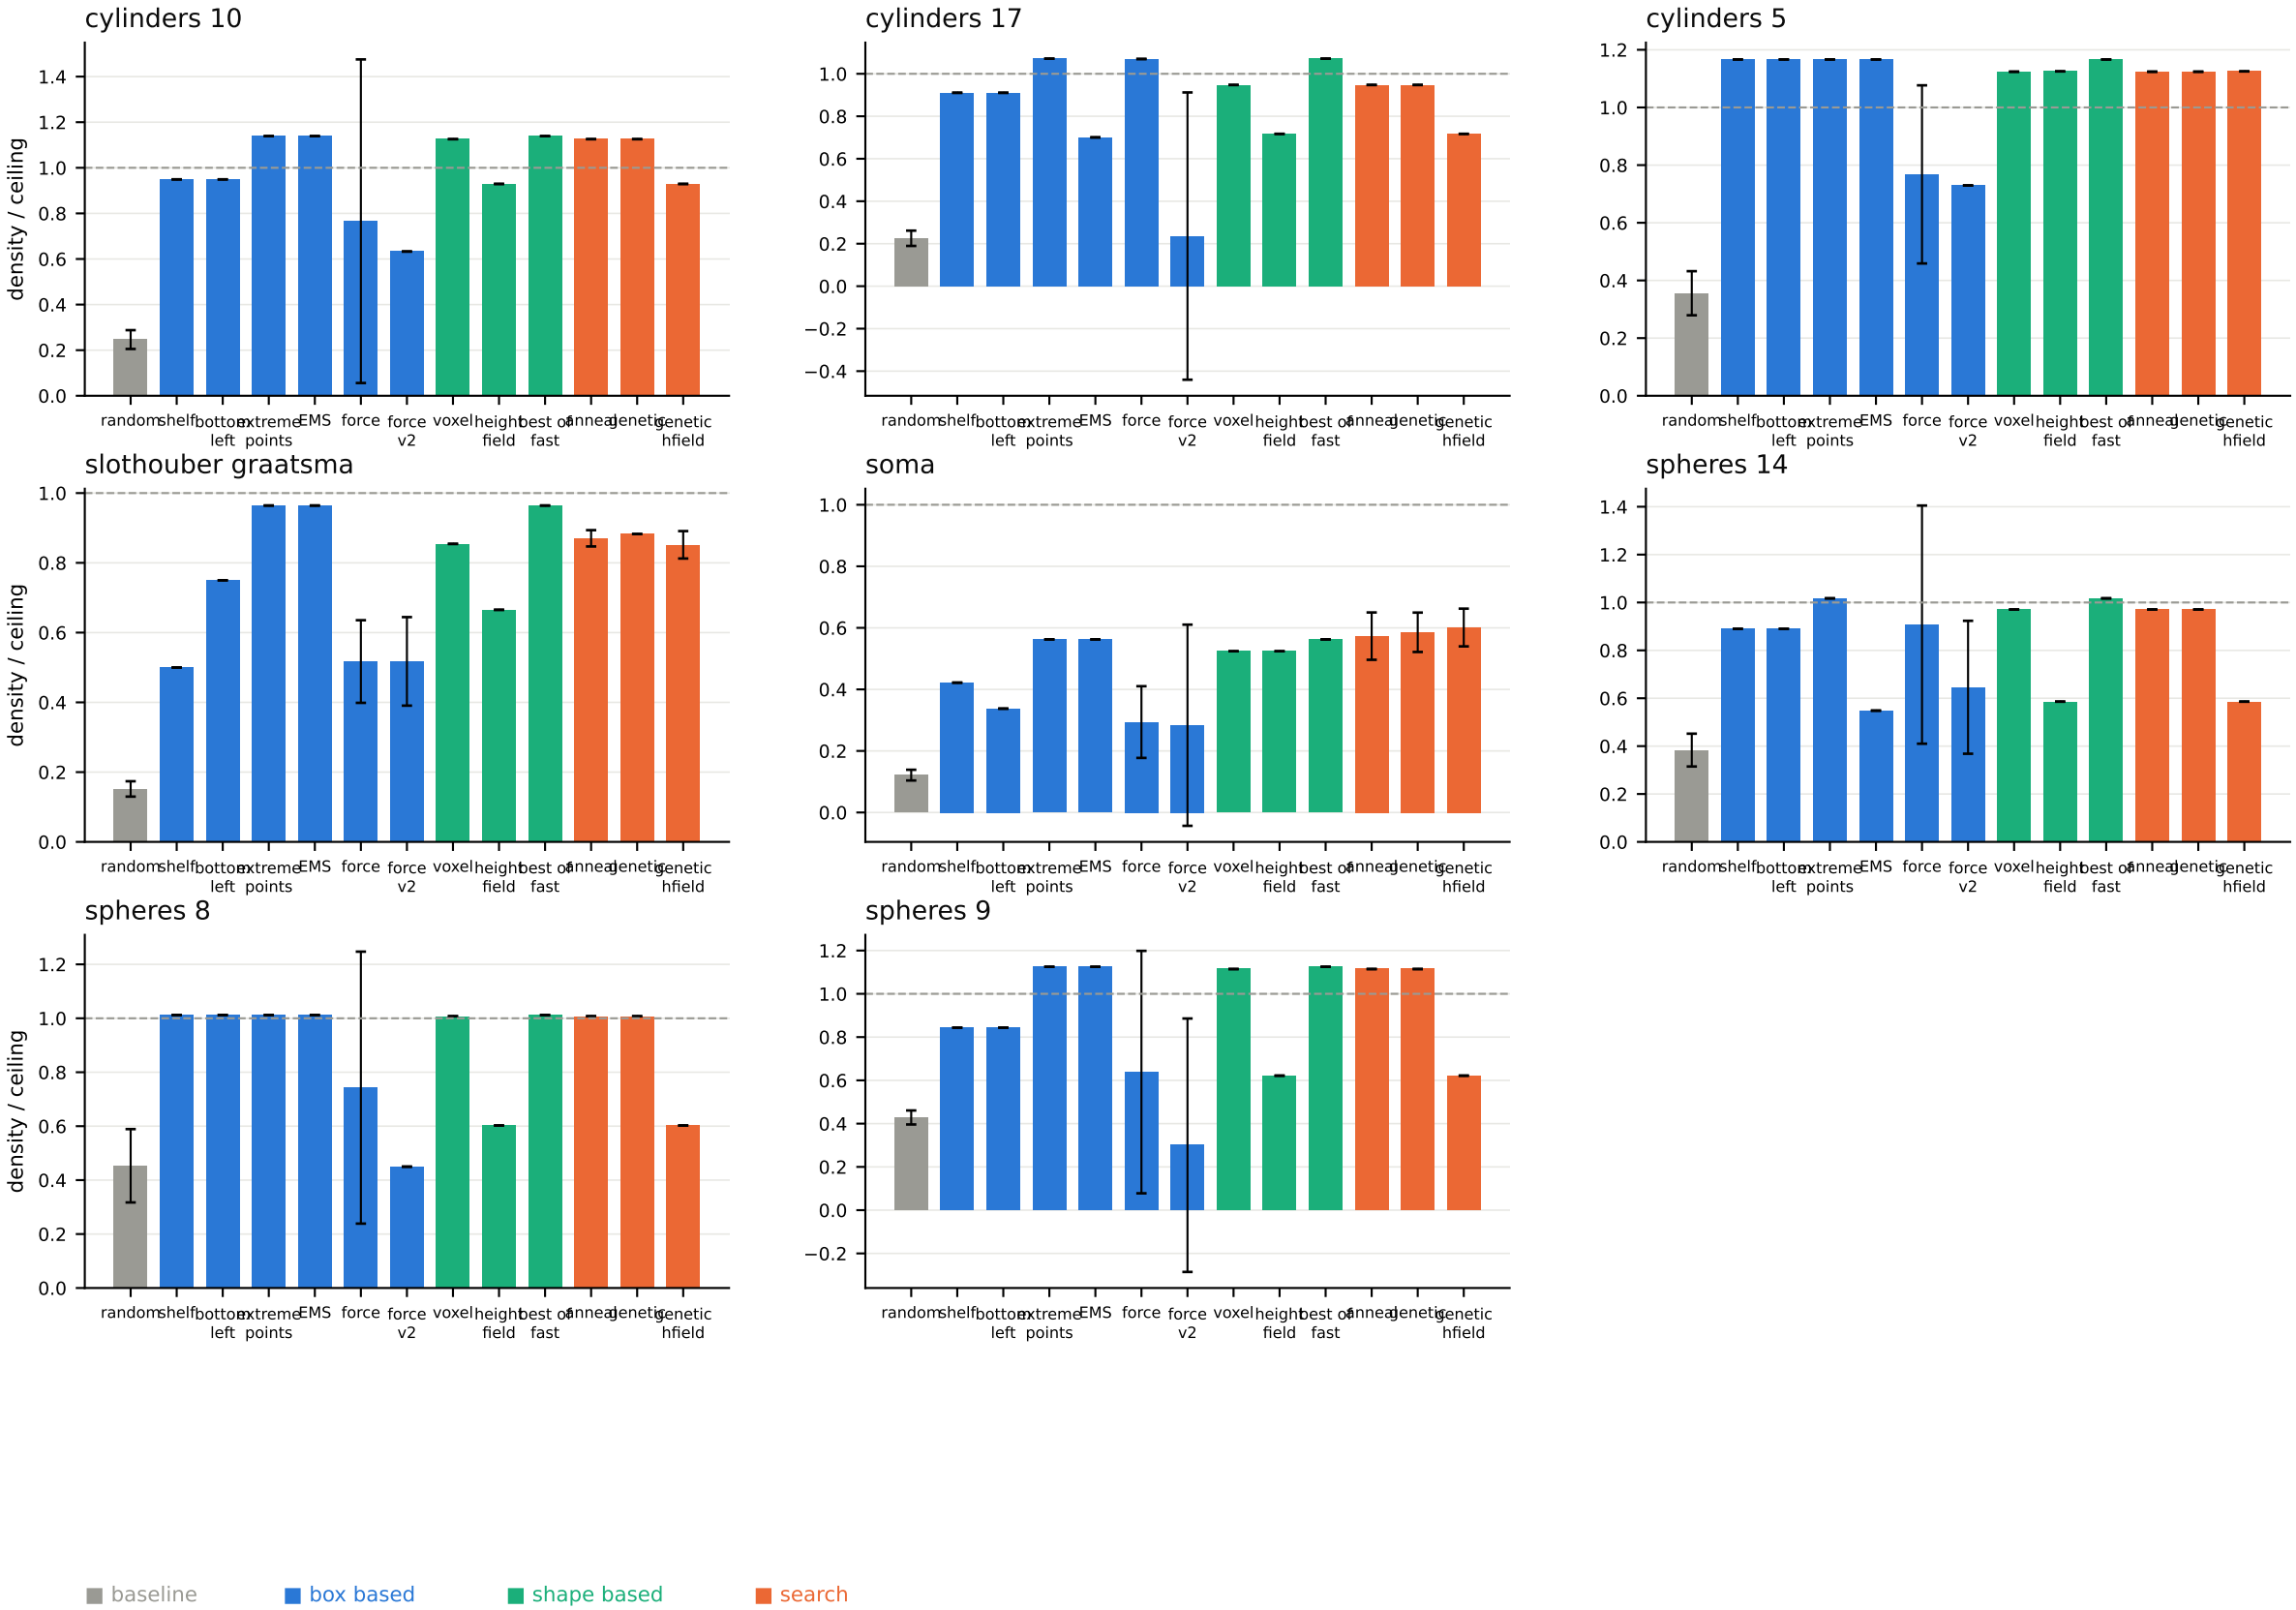

baseline box based shape based search

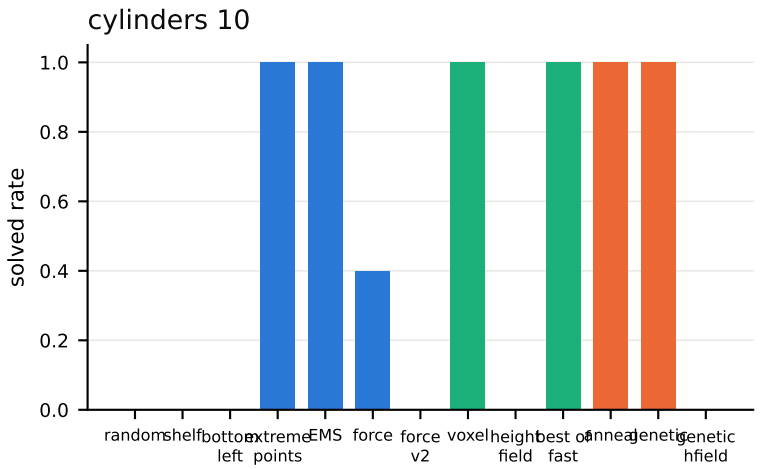

Verification literature open: ratio to the known optimum

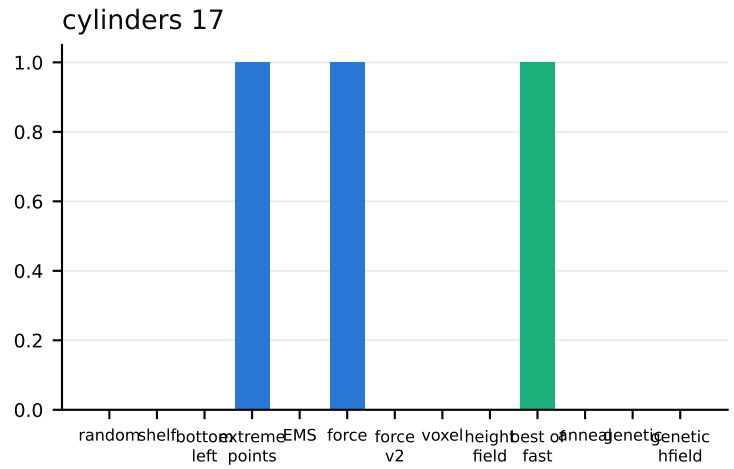

open mode (minimize the box), t = 0, voxel pitch 2 mm; ratio = density / ceiling; 1.0 = the known optimum (dashed); bars = mean over instances and repeats, 99% CI

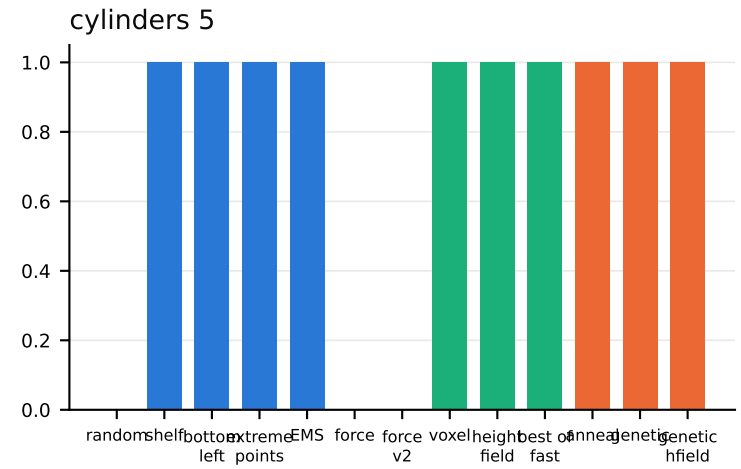

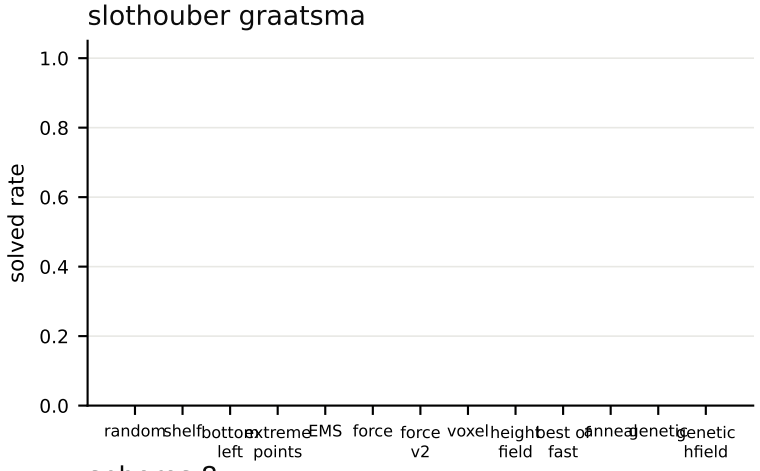

Verification literature open: solved rate

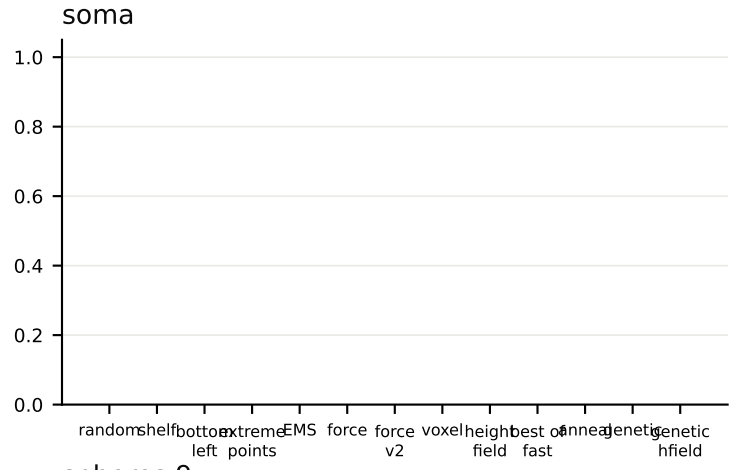

solved = valid, all parts placed and within 2% of the optimum (open mode, voxel pitch 2 mm)

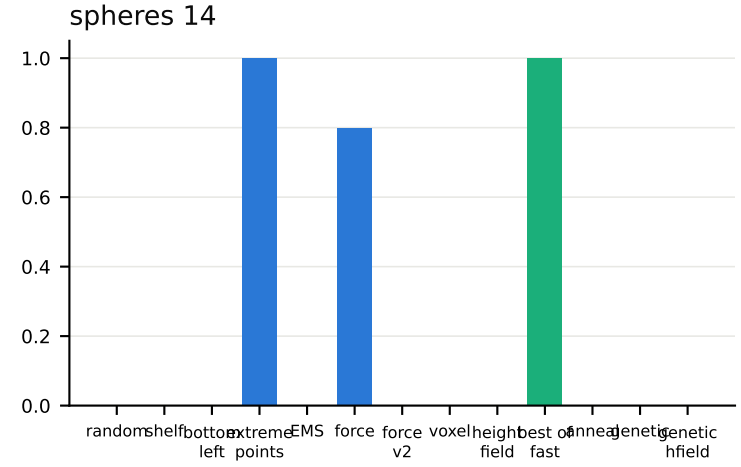

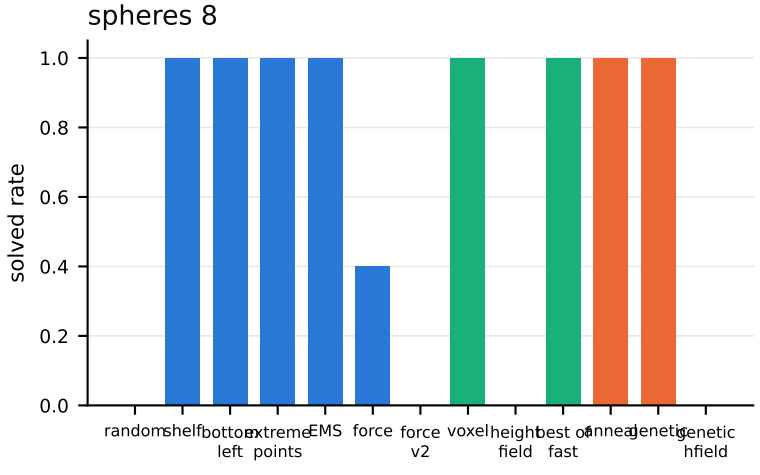

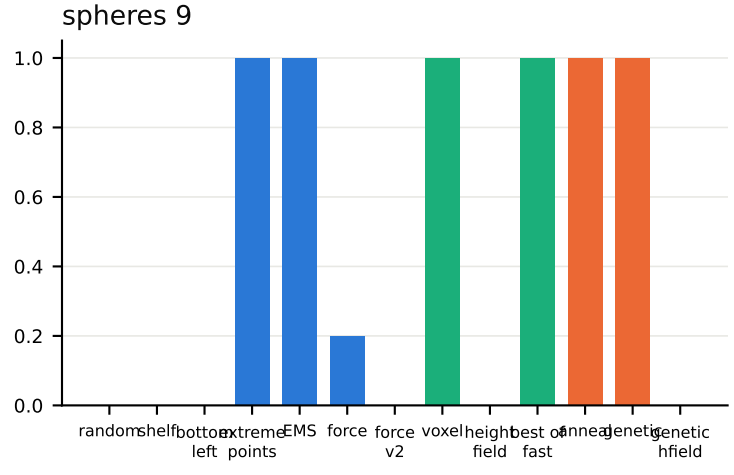

baseline box based shape based search

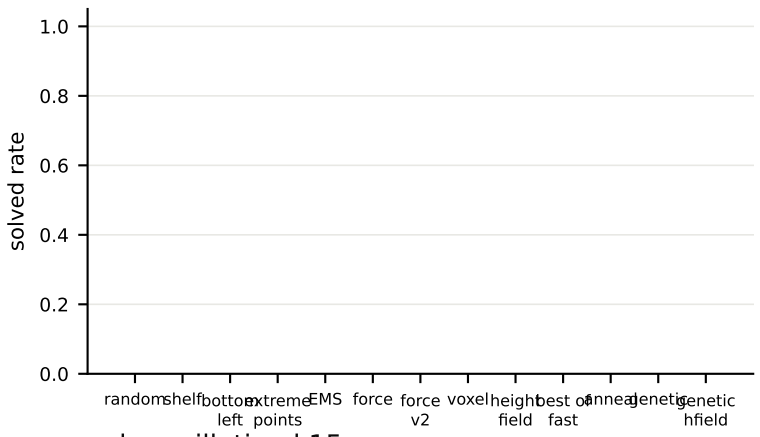

Verification scrabble container: share of parts that fit the proven box

container mode (the instance's own box), t = 0, voxel pitch 2 mm; 1.0 = everything fits; bars = mean over instances and repeats, 99% CI

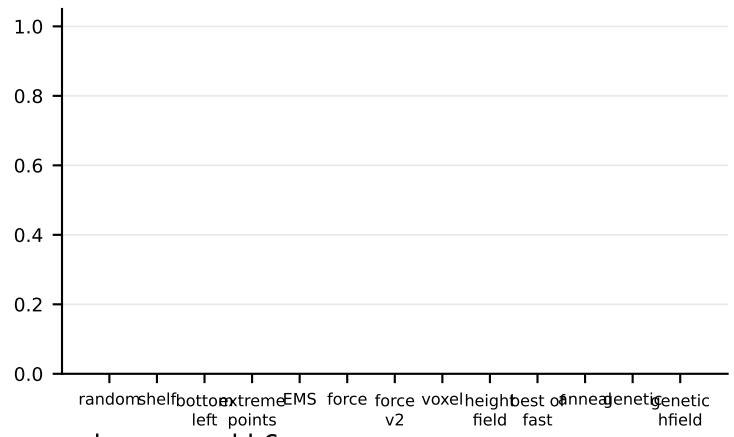

Verification scrabble container: solved rate

solved = valid, all parts placed and within 2% of the optimum (container mode, voxel pitch 2 mm)
